## CONTENTS

|   |            |
|---|------------|
| <b>GENERAL COURSES .....</b>                                    | <b>3</b>   |
| <i>BASIC SCIENCE KNOWLEDGE.....</i>                             | <i>3</i>   |
| 1. General Physics 1 (PH019IU).....                             | 3          |
| 2. General Physics 1 Lab (PH020IU) .....                        | 7          |
| 3. General Physics 2 (PH021IU).....                             | 11         |
| 4. General Physics 2 Lab (PH022IU) .....                        | 15         |
| 5. General Physics 3 (PH023IU).....                             | 18         |
| 6. General Physics 3 Lab (PH024IU) .....                        | 21         |
| 7. Calculus 1 (MA001IU).....                                    | 24         |
| 8. Calculus 2 (MA003IU).....                                    | 28         |
| 9. Differential Equations (PH026IU) .....                       | 32         |
| 10. Probability and statistics for engineers (PH030IU).....     | 35         |
| 11. Programming for Engineers (EE057IU).....                    | 39         |
| 12. Programming for Engineers Laboratory (EE058IU) .....        | 43         |
| 13. Introduction to Computer for Engineers (EE050IU).....       | 46         |
| 14. Mathematics for Engineers (PH025IU) .....                   | 50         |
| 15. Engineering Ethics and Professional Skills (PE020IU) .....  | 54         |
| <i>POLITICAL, ECONOMIC, CULTURAL AND SOCIAL KNOWLEDGE .....</i> | <i>57</i>  |
| 16. Marxist-Leninist philosophy (PE015IU).....                  | 57         |
| 17. Marxist – Leninist Political Economy (PE016IU) .....        | 61         |
| 18. Scientific socialism (PE017IU) .....                        | 67         |
| 19. History of Vietnamese communist party (PE018IU) .....       | 72         |
| 20. Ho Chi Minh's Thoughts (PE019IU).....                       | 77         |
| 21. Critical Thinking (PE008IU) .....                           | 82         |
| 22. Project Management (PH056IU).....                           | 86         |
| <i>FOREIGN LANGUAGE .....</i>                                   | <i>91</i>  |
| 23. Writing AE1 (Academic Writing).....                         | 91         |
| 24. Listening AE1 (Listening & Note-taking).....                | 95         |
| 25. Writing AE2 (Research Paper Writing).....                   | 99         |
| 26. Speaking AE2 (Effective Presentations) .....                | 105        |
| <b>CORE COURSES.....</b>  | <b>110</b> |
| 27. Introduction to Space Engineering (PH018IU) .....           | 110        |

|                              |  |            |
|------------------------------|--|------------|
| 28.                          | Earth Observation and the Environment (PH027IU).....                     | 113        |
| 29.                          | Introduction to relativity and modern physics (PH029IU) .....            | 117        |
| 30.                          | Introduction to Signals and Systems (PH032IU).....                       | 120        |
| 31.                          | Signals and Systems Laboratory (PH033IU).....                            | 124        |
| 32.                          | Introduction to Space Communications (PH035IU).....                      | 127        |
| 33.                          | Remote Sensing (PH036IU).....  | 131        |
| 34.                          | Space Environment (PH037IU) .....  | 135        |
| 35.                          | Satellite technology (PH040IU).....                                      | 139        |
| 36.                          | iOS Programming Fundamentals (PH055IU).....                              | 143        |
| 37.                          | Introduction to Digital Image Processing (PH038IU).....                  | 147        |
| 38.                          | Digital Image Processing Laboratory (PH039IU).....                       | 151        |
| 39.                          | Optics and Photonics (PH031IU).....                                      | 155        |
| <b>MAJOR COURSES .....</b>   |  | <b>158</b> |
| 40.                          | Big Data Analytics for Remote Sensing (PH053IU) .....                    | 158        |
| 41.                          | Big Data Analytics for Remote Sensing Laboratory (PH054IU).....          | 162        |
| 42.                          | Navigation systems (PH047IU) .....                                       | 166        |
| 43.                          | Geolocation App Development for iOS (PH057IU) .....                      | 170        |
| 44.                          | Digital Signal Processing (EE092IU) .....                                | 173        |
| 45.                          | Digital Signal Processing Laboratory (EE093IU).....                      | 177        |
| 46.                          | Digital image processing (PH041IU) .....                                 | 180        |
| 47.                          | Satellite Signal and Image Processing Laboratory (PH043IU).....          | 184        |
| 48.                          | Antenna and Microwave Engineering (EE105IU).....                         | 189        |
| 49.                          | Antenna and Microwave Engineering Laboratory (EE124IU).....              | 193        |
| 50.                          | Research Project (PH042IU) .....   | 197        |
| 51.                          | Internship (PH044IU) .....   | 199        |
| 52.                          | Thesis (PH050IU) .....   | 201        |
| <b>ELECTIVE COURSES.....</b> |  | <b>203</b> |
| 53.                          | Geographic Information System (GIS) and Spatial Analysis (PH046IU) ..... | 203        |
| 54.                          | Advanced Remote Sensing (PH049IU).....                                   | 207        |
| 55.                          | Emerging Engineering Technologies (EE133IU).....                         | 211        |
| 56.                          | Radio Astrophysics (PH048IU) .....                                       | 215        |
| 57.                          | Fundamental of Surveying (PH045IU) .....                                 | 218        |

**GENERAL COURSES****BASIC SCIENCE KNOWLEDGE****1. General Physics 1 (PH019IU)**

|   |  |
|---|--|
| Course designation  | <i>This subject will provide an introduction to mechanics including concepts and principles of kinetics, dynamics, energetics of motion of a particle and a rigid body and provide a basic knowledge of fluid mechanics; macroscopic description of gasses; heat and the first law of thermodynamics; heat engines and the second law of thermodynamics; microscopic description of gasses and the kinetic theory of gasses.</i> |
| Semester(s) in which the course is taught                     | 1, 2, summer semester  |
| Person responsible for the course                             | Assoc. Prof. Phan Bảo Ngọc<br>Dr. Phan Hiền Vũ   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, assignment.   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 170<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 50<br>Private study including examination preparation, specified in hours: 120   |
| Credit points/ECTS  | 4 credits/6.16 ECTS  |
| Required and recommended prerequisites for joining the course | None   |

|                          |   |   |
|--------------------------|---|---|
| Course learning outcomes | Upon the successful completion of this course students will be able to: |   |
|                          | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|                          | Knowledge   | CLO1. Understand basic knowledge of kinematics, dynamics, and laws of conservation of a mechanical system.<br><br>CLO2. Understand basic knowledge of fluid mechanics, laws of thermodynamics, and the kinetic theory of an ideal gas.<br><br>CLO3. Apply knowledge of physics to solving problems in science and engineering |
|                          | Skill   | CLO4. Apply skills to analyzing and solving problems in science and engineering   |
|                          | Attitude  | CLO5. Communicate effectively in writing manner   |

| Content   | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (2 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> <table><tr><th>Topic</th><th>Weight</th><th>Level</th></tr><tr><td>Chapter 1: Bases of Kinematics</td><td>2</td><td>I, T,U</td></tr><tr><td>Chapter 2: The Law of Motion</td><td>2</td><td>I, T,U</td></tr><tr><td>Chapter 3: Work and Mechanical Energy</td><td>2</td><td>I, T,U</td></tr><tr><td>Chapter 4: Linear Momentum and Collisions</td><td>2</td><td>I, T,U</td></tr><tr><td>Chapter 5: Rotation of a Rigid Object About a Fixed Axis</td><td>2</td><td>I, T,U</td></tr><tr><td>Chapter 6: Equilibrium and Elasticity</td><td>2</td><td>I</td></tr><tr><td>Chapter 7: Universal Gravitation</td><td>2</td><td>I</td></tr><tr><td>Chapter 1: Fluid Mechanics</td><td>2</td><td>I, T,U</td></tr><tr><td>Chapter 2: Temperature, Heat, and the First Law of Thermodynamics</td><td>4</td><td>I, T,U</td></tr><tr><td>Chapter 3: The Kinetic Theory of Gasses</td><td>5</td><td>I, T,U</td></tr><tr><td>Chapter 4: Entropy and the Second Law of Thermodynamics</td><td>4</td><td>I, T,U</td></tr></table> | Topic  | Weight | Level | Chapter 1: Bases of Kinematics | 2 | I, T,U | Chapter 2: The Law of Motion | 2 | I, T,U | Chapter 3: Work and Mechanical Energy | 2 | I, T,U | Chapter 4: Linear Momentum and Collisions | 2 | I, T,U | Chapter 5: Rotation of a Rigid Object About a Fixed Axis | 2 | I, T,U | Chapter 6: Equilibrium and Elasticity | 2 | I | Chapter 7: Universal Gravitation | 2 | I | Chapter 1: Fluid Mechanics | 2 | I, T,U | Chapter 2: Temperature, Heat, and the First Law of Thermodynamics | 4 | I, T,U | Chapter 3: The Kinetic Theory of Gasses | 5 | I, T,U | Chapter 4: Entropy and the Second Law of Thermodynamics | 4 | I, T,U |

**2. General Physics 1 Lab (PH020IU)**

|   |   |
|---|---|
| Course designation  | <i>This subject is an experimental course that provides students necessary skills to do experiment of mechanics, thermodynamics, and fluid mechanics.</i>   |
| Semester(s) in which the course is taught                     | 1, 2, summer semester   |
| Person responsible for the course                             | MSc. Trịnh Thanh Thủy   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Experiment, writing report  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 110<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 50<br>Private study including examination preparation, specified in hours: 60 |
| Credit points/ECTS  | 2 credits/4 ECTS  |
| Required and recommended prerequisites for joining the course | Parallel course: General Physics 1 (PH019IU)  |

|                          |   |   |
|--------------------------|---|---|
| Course learning outcomes | Upon the successful completion of this course students will be able to: |   |
|                          | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|                          | Knowledge   | CLO1. Understand basic knowledge of law of conservations and dynamics of rigid body and of the kinetic energy of ideal gas and the second law of thermodynamics.                  |
|                          | Skill   | CLO2. Approach and solve problems in Mechanic and Thermodynamics experiments<br><br>CLO3. Write scientific report, have understanding the relations between theory and experiment |
|                          | Attitude  | CLO4. Communicate effectively in writing manner   |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|

|   |   |
|---|---|
| Course designation  | <i>This course is a continuation of Calculus 1. Its aim to equip student with basis concepts of sequence, series, vector functions, functions of several variables, multiple integrals and their applications</i> |
| Semester(s) in which the course is taught                     | 1, 2, summer semester   |
| Person responsible for the course                             | Assoc. Prof. Mai Duc Thanh, Assoc. Prof. Tran Vu Khanh, Dr. Nguyen Minh Quan, Dr. Nguyen Anh Tu, Dr. Ta Quoc Bao.   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lectures, assignments   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 170<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): 50 (lectures)<br>Private study including examination preparation, specified in hours: 120  |
| Credit points/ECTS  | 4 credits/6.16 ECTS   |
| Required and recommended prerequisites for joining the course | Previous course: Calculus 1 (MA001IU)   |

|                          |   |   |
|--------------------------|---|---|
| Course learning outcomes | Upon the successful completion of this course students will be able to: |   |
|                          | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|                          | Knowledge   | <p>CL01. Have basic knowledge of series, functions of several variables, multiple integrals (Program outcomes: a)</p> <p>CL02. Have basic knowledge of vector calculus (Program outcomes: a)</p>  |
|                          | Skill   | <p>CL03. Can compute partial derivatives, multiple integral (Program outcomes: a, j)</p> <p>CL04. Can show the convergence of a sequence and a series and use power series to simplify computation. Can show the optimal problem using partial derivatives, can find the volume of an object in higher dimension by using the multiple integrals (Program outcomes: i, h)</p> |
|                          | Attitude  | CL05. Confident when dealing with partial derivatives, multiple integrals. Comfortable with using partial derivatives and multiple integrals in practical situations. (Program outcome: j, k)   |

|         |  |               |              |

**10. Probability and statistics for engineers (PH030IU)**

|   |   |
|---|---|
| Course designation  | <i>This course develops an engineer's view of probability, started from the notion of chance, relative frequencies and then probability. It covers all fundamental concepts in probability, random variables and statistics that will serve everyday an engineer working in practical fields such as quality control, signal processing, biomedical engineering, automatic control, communications etc...</i> |
| Semester(s) in which the course is taught                     | 1, 2, summer semester   |
| Person responsible for the course                             | Department of Mathematics   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, project, seminar.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the course | Previous course: Calculus 2 (MA003IU)   |

|                          |  |   |
|--------------------------|--|---|
| Course objectives        | <p>This course will provide students with:</p> <ul style="list-style-type: none"> <li>• Using data from a variety of sources such as quality control, signal processing, biomedical engineering, automatic control, communications etc</li> <li>• Contemporary computing and database environments, such as R/Python, and being exposed to case studies from outside the classroom.</li> <li>• Skill of formulating a practical problem related to probability and statistics in an analytical form in order to solve it.</li> </ul> |   |
| Course learning outcomes | Upon the successful completion of this course students will be able to:  |   |
|                          | <b>Competency level</b>  | <b>Course learning outcome (CLO)</b>  |
|                          | Knowledge  | <p>CL01. Compute probability of simple and complicated events with probability rules; Evaluate probability, mean and variance of random variables and function of random variables</p> <p>CL02. Apply the concept of hypothesis testing and apply it to statistical problems.</p> |
|                          | Skill  | CL03. Construct a practical problem related to probability and statistics in an analytical form in order to solve it  |
|                          | Attitude   |   |

| Content  | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> <table><tr><th>Topic</th><th>Weight</th><th>Level</th></tr><tr><td>Introduction to Probability</td><td>1</td><td>I, T</td></tr><tr><td>Axiomatic definition</td><td>2</td><td>T, U</td></tr><tr><td>Introduction to random variables (RV)</td><td>3</td><td>T, U</td></tr><tr><td>Mean, Variance and Higher Moments of a RV</td><td>2</td><td>T, U</td></tr><tr><td>Random vectors</td><td>2</td><td>I, T</td></tr><tr><td>Introduction to Computer Simulation of Random Variables</td><td>2</td><td>T, U</td></tr><tr><td>Fundamental sampling distributions and data descriptions</td><td>2</td><td>T, U</td></tr><tr><td>Estimation Problems</td><td>1</td><td>T, U</td></tr></table> | Topic | Weight | Level | Introduction to Probability | 1 | I, T | Axiomatic definition | 2 | T, U | Introduction to random variables (RV) | 3 | T, U | Mean, Variance and Higher Moments of a RV | 2 | T, U | Random vectors | 2 | I, T | Introduction to Computer Simulation of Random Variables | 2 | T, U | Fundamental sampling distributions and data descriptions | 2 | T, U | Estimation Problems | 1 | T, U |

## 11. Programming for Engineers (EE057IU)

|   |  |
|---|--|
| Course designation  | <p><i>This course is aimed at students with no or little programming experiences. Generally, it endeavors to provide students with an understanding about the role of programming that can play in solving problems. The course content thus equips the basic terminologies of principles of programming and data structures via C programming language.</i></p> <p><i>The fundamentals include the history of programming, stepwise refinement and flow-charting, introduction to algorithm analysis; basic data types, type conversion, making decision and looping, branching, I/O operations; functions, recursion; arrays and multiple-subscripted arrays, searching and sorting algorithms; pointers/function pointers; characters and strings; structures, unions, enumerates, operations on bits; introduction to abstract data types; dynamic memory allocation, file processing.</i></p> |
| Semester(s) in which the course is taught                     | 1, 2, summer semester  |
| Person responsible for the course                             | Dr. Nguyễn Ngọc Trường Minh  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, project   |
| Workload (incl. contact hours, self-study hours)              | <p>(Estimated) Total workload: 127.5</p> <p>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5</p> <p>Private study including examination preparation, specified in hours: 90</p>   |
| Credit points/ECTS  | 3 credits/4.62 ECTS  |
| Required and recommended prerequisites for joining the course | None   |

| Course objectives        | The course is designed to provide students with complete knowledge of C language. Students will be able to develop logics which will help them to create programs, applications in C. Also, by learning the basic programming constructs they can easily switch over to any other language in future.   |                  |                               |           |                              |       |                              |          |  |

## 12. Programming for Engineers Laboratory (EE058IU)

|   |  |
|---|--|
| Course designation  | <i>This laboratory is associated with the Programming for Engineers course. It covers everything that students will need to understand the basic concepts covered in the theory course, as well as the implementation of simple-to-complex C programs especially in the field of engineering. Topics include data types, control structures, functions, arrays, files, and the mechanics of running, testing, and debugging.</i> |
| Semester(s) in which the course is taught                     | 1, 2, summer semester  |
| Person responsible for the course                             | M. Eng, Trang Kiến   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 55<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25<br>Private study including examination preparation, specified in hours: 30   |
| Credit points/ECTS  | 1 credit/2 ECTS  |
| Required and recommended prerequisites for joining the course | Parallel course: Programming for Engineers (EE058IU)   |
| Course objectives   | This course conducts sequence of laboratory experiments to present and illustrate implement and debug programs using the C techniques which can investigate some case studies in order to comprehend professional and ethical responsibilities   |

|                          |   |                               |         |
|--------------------------|---|-------------------------------|---------|
| Course learning outcomes | Upon the successful completion of this course students will be able to:<br><br>CLO1: Able to design problem solutions, implement and debug programs using the C techniques.<br><br>CLO2: Able to examine some case studies to understand the professional and ethical responsibility.<br><br>CLO3: Understand the impact of electrical engineering solutions in a global, economic, environmental and social context. |                               |         |
|                          | Competency level  | Course learning outcome (CLO) |         |
|                          | Knowledge   | CLO1, CLO2, CLO3              |         |
|                          | Skill   | CLO1, CLO2, CLO3              |         |
|                          | Attitude  | CLO2, CLO3                    |         |

**14. Mathematics for Engineers (PH025IU)**

|   |   |
|---|---|
| Course designation  | <i>This course develops a synthetic view of mathematical knowledge and skills in analyzing and modeling Signals and Systems. Covers review of fundamental harmonic analysis, with applications in Electronics, Control, Communications and Signal processing.</i> |
| Semester(s) in which the course is taught                     | 1, 2, summer semester   |
| Person responsible for the course                             | Dr. Trần Nguyên Lân   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, assignment.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 170<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 50<br><br>Private study including examination preparation, specified in hours: 120  |
| Credit points/ECTS  | 4 credits/6.16 ECTS   |
| Required and recommended prerequisites for joining the course | Previous course: Calculus 2 (MA003IU)   |

|                          |   |   |
|--------------------------|---|---|
| Course learning outcomes | Upon the successful completion of this course students will be able to: |   |
|                          | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|                          | <b>Knowledge</b>  | CLO1. Show the understanding of complex analysis, determinants, and matrices. |
|                          | <b>Skill</b>  | CLO2. Apply skills to solve problems in science and engineering.              |
|                          | <b>Attitude</b>   | CLO3. Recognize the need for further self-learning in mathematics.            |

|                   |  |               |              |

## 15. Engineering Ethics and Professional Skills (PE020IU)

|   |  |
|---|--|
| Module designation  | <i>This course is designed to introduce engineering students to the concepts, theory and practice of engineering ethics. It will allow students to explore the relationship between ethics and engineering and apply classical moral theory and decision making for engineering issues encountered in academic and professional careers. This course also provides students with the professional skills: sharing ideas and concepts, team working, and presentation skills.</i> |
| Semester(s) in which the module is taught                     | 1, 2, summer semester  |
| Person responsible for the module                             | Dr. Nguyễn Hoài Nghĩa, Dr. Huỳnh Võ Trung Dũng   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, presentation, and assignments.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90  |
| Credit points/ECTS  | 3 credits/4.62 ECTS  |
| Required and recommended prerequisites for joining the module | None   |
| Course learning outcomes                                      | Overall objectives are to equip IU students with knowledge about the philosophies of ethics, professional practice, and world culture.<br>Students who complete the course will be able to perform the following tasks: <ul style="list-style-type: none"> <li>● Having knowledge of the definition of engineering ethics, codes of ethics, ethic philosophies, intellectual property, copyright, and fair use of copyrighted materials and</li> </ul>                           |

|                                    | <p>research data.</p> <ul style="list-style-type: none"><li>● Using different problem-solving techniques to solve ethical dilemmas.</li><li>● Analyzing social, environmental, legal aspects, safety and sustainability issues of engineering activities.</li></ul>   |        |         |       |  |   |   |                      |   |      |                                   |   |      |                      |   |         |                                    |   |      |  |   |      |  |   |   |                      |   |      |  |   |      |   |   |   |        |   |   |

**POLITICAL, ECONOMIC, CULTURAL AND SOCIAL KNOWLEDGE****16. Marxist-Leninist philosophy (PE015IU)**

|   |   |
|---|---|
| Course title  | Marxist-Leninist philosophy ( <i>Triết học Mac-Lenin</i> )  |
| Module designation  | <i>The course equips students with basic knowledge of Marxist-Leninist philosophy.</i>  |
| Semester(s) in which the module is taught                     | 1, 2, summer semester   |
| Person responsible for the module                             | Lecturers at School of Political and Administration Sciences, VNU-HCM   |
| Language  | Vietnamese  |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, group discussion, presentation   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/ 4.62 ECTS  |
| Required and recommended prerequisites for joining the module | None  |
| Module objectives   | <ul style="list-style-type: none"><li>- The course equips students with the basic contents of the worldview and the Marxist-Leninist philosophical methodology.</li><li>- Help students to apply knowledge about worldview, Marxist-Leninist philosophical methodology creatively in cognitive and practical activities, in order to solve problems of social life of country and time.</li></ul> |

|                             |  |
|-----------------------------|--|
| Tentative learning outcomes | <p>I. Knowledge</p> <p>1. Philosophy and its role in social life</p> <p>1.1. Conceptualize philosophy and some basic concepts</p> <p>1.2. Recognize the opposition between materialism and idealism in solving the fundamental problem of philosophy</p> <p>1.3. Understanding dialectical materialism - the highest developed form of it</p> <p>1.4. Understand the birth, objects, functions and roles of Marxist-Leninist philosophy</p> <p>2. Dialectical materialism</p> <p>2.1. Understanding matter from the point of view of dialectical materialism</p> <p>2.2. Understanding consciousness from the point of view of dialectical materialism</p> <p>2.3. Resolving the relationship between matter and consciousness from the point of view of dialectical materialism</p> <p>2.4. Understand dialectics and materialistic dialectics</p> <p>2.5. Understand the two basic principles of materialist dialectic and derive the methodological significance of each</p> <p>2.6. Understand the pairs of basic categories of the material dialectic and derive the methodological meaning of each pair of categories</p> <p>2.7. Understand the fundamental rules of the materialist dialectic and derive the methodological meaning of each one</p> <p>2.8. Understand practice, perception, the role of practice in perception and truth</p> <p>3. Historical materialism</p> <p>3.1. Understand the role of production and its methods in the existence and development of society</p> <p>3.2. Understand the dialectical relationship between forces of production and relations of production</p> <p>3.3. Understand the dialectical relationship between infrastructure and market economy; the natural development of socio-economic forms</p> <p>3.4. Understand class, class struggle; ethnicity and the relationship among class, nation and humanity</p> <p>3.5. Understanding the state and social networks</p> <p>3.6. Understand the dialectical relationship between social existence and social consciousness</p> <p>3.7. Understand the nature of human being; the phenomenon of alienation and liberation of man from the relationship between the individual and society, and from the role of the masses.</p> |
|-----------------------------|--|

|  | <p>II. Skills</p> <p>Demonstrate the ability to generalize, think, debate, critique, and groupwork</p> <p>1. Have the skill of generalizing to pick out keywords for each content and think systematically</p> <p>2. Have skills in presenting, explaining, criticizing, debating and eloquent about theories being studied and researched based on practice</p> <p>3. Have skills in social communication, cooperation and teamwork, sharing knowledge and experience, ability to run a group</p> <p>III. Attitudes</p> <p>Express consciousness and awareness during and after learning</p> <p>1. Have a sense of responsibility to protect the science, revolution and humanity of Marxism-Leninism</p> <p>2. Have a sense of personal responsibility towards the community</p> <p>3. Have awareness of the need for lifelong learning and research and applying practically.</p> |       |        |       |              |   |      |  |    |      |                         |    |      |                        |    |      |

### 17. Marxist – Leninist Political Economy (PE016IU)

|   |   |
|---|---|
| Course title  | Marxist-Leninist political economy ( <i>Kinh tế chính trị Mac-Lenin</i> )   |
| Module designation  | <i>The program consists of 6 chapters, in which Chapter 1 discusses the Objects, research methods and functions of Marxist-Leninist political economy; the remain chapters present the core content of Marxist-Leninist Political Economy according to the module's objectives. Specifically, the content includes commodities, markets and the role of stakeholders; producing surplus value; competition and monopoly; socialist-oriented market economy and economic interest relations in Vietnam; and industrialization, modernization, and international economic integration in Vietnam.</i> |
| Semester(s) in which the module is taught                     | 1, 2, summer semester   |
| Lecturer  | Lecturers at School of Political and Administration Sciences, VNU-HCM   |
| Language  | Vietnamese  |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, group discussion, presentation   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 85<br>Contact hours (lecture, exercise): 25<br>Private study including examination preparation, specified in hours: 60  |
| Credit points/ECTS  | 2 credits/ 3.08 ECTS  |
| Required and recommended prerequisites for joining the module | Parallel course: Marxist-Leninist philosophy (PE015IU)  |

|                             |  |
|-----------------------------|--|
| Module objectives           | <p>Firstly, to equip students with fundamental knowledge of Marxist-Leninist political economy in the context of economic development of the country and the world today; to ensure the basic, systematic, scientific, and up-to-date knowledge associated with practice, creativity, skills, thinking, and traits of students, as well as to enhance the interdisciplinary and non-overlapping interoperability, also reduce the amount of academic or outdated material for college and university non-theoretical students.</p> <p>Secondly, on that basis, to form the mindset, skills of analysis, evaluation, and identification of the nature of economic benefit relations in the country's socio-economic development, contributing to helping students build appropriate social responsibility in the job position and life after graduation.</p> <p>Thirdly, to contribute to building the stance and ideology of Marxism-Leninism towards students.</p>  |
| Tentative learning outcomes | <p>I. Knowledge</p> <p><i>1. Objects, research methods and functions of Marxist-Leninist political economy</i></p> <p>1.1. Understanding the formation and development of Marxist-Leninist political economy</p> <p>1.2. Identify the research object of Marxist-Leninist political economy</p> <p>1.3. Understand the research method of Marxist-Leninist political economy</p> <p>1.4. Understand the functions of Marxist-Leninist political economy course</p> <p><i>2. Commodities, markets, and the role of stakeholders</i></p> <p>2.1. Understand the definition and the conditions for the production of goods</p> <p>2.2. Understanding the commodity, its two attributes, and the relationship between them</p> <p>2.3. Understand the relationship between the duality of commodity-producing labor and the two attributes of commodities</p> <p>2.4. Understand the quality and quantity of the good's value and the affecting factors</p> <p>2.5. Understand the origin, nature and function of money</p> <p>2.6. Understanding the market, the role of the market, the market mechanism and the market economy</p> <p>2.7. Understand some key patterns of the market economy</p> <p>2.8. Understand the role of stakeholders</p> <p><i>3. Surplus value in a market economy</i></p> <p>3.1. Understand the concept, the general formula and contradiction of capital</p> |

- 3.2. Understand what the commodity labor is and why need to study it
- 3.3. Understand what surplus value is
- 3.4. Understanding the nature of capital accumulation
- 3.5. Understand the concepts: production cost, profit, profit margin, average profit, commercial profit, factors affecting profit rate
- 3.6. Understand what income is
- 3.7. Understanding capitalist rents, their types and land prices
- 4. Competition and monopoly in the market economy*
- 4.1. Understand the relationship between competition and monopoly in a market economy
- 4.2. Understand the causes of monopoly formation in the market economy
- 4.3. Understanding the basic economic features of monopoly in capitalism from Lenin's viewpoint
- 4.4. Understand the causes of formation and development of state monopoly capitalism
- 4.5. Understand the nature and the main manifestations of state monopoly in capitalism
- 4.6. Understand the historical role of capitalism
- 5. Socialist-oriented market economy and economic interest relations in Vietnam*
- 5.1. Understand the concept of a socialist-oriented market economy in Vietnam
- 5.2. Understand the objective necessity of developing a socialist-oriented market economy in Vietnam
- 5.3. Understanding the characteristics of the socialist-oriented market economy in Vietnam
- 5.4. Understand what the socialist-oriented market economy institution is and the need to improve it
- 5.5. Grasp the basic contents of improving the socialist-oriented market economy institution in Vietnam
- 5.6. Understand the concept and the relationship of economic benefits
- 5.7. Understand the role of the state in ensuring the harmonization of relations of interest
- 6. Vietnam's industrialization, modernization and international economic integration*
- 6.1. Understand what the industrial revolution is and be able to generalize the historical revolutions
- 6.2. Understand the role of the industrial revolution for development
- 6.3. Understand the concept and typical models of industrialization in the world
- 6.4. Understand the objective necessity of industrialization and

modernization in Vietnam

6.5. Understand the contents of industrialization and modernization in Vietnam

6.6. Understand industrialization and modernization in Vietnam in the context of the 4.0 industrial revolution.

6.7. Understand the concept and the reason why international economic integration an objective necessity

6.8. Understand the contents and positive and negative impacts of international economic integration

6.9. Grasp the direction of improving the efficiency of international economic integration in Vietnam's development

## II. Skills

*Demonstrate the ability to generalize, think, debate, critique, and groupwork*

1. Have the skill of generalizing to pick out keywords for each content and think systematically

2. Have skills in presenting, explaining, criticizing, debating and eloquent about theories being studied and researched based on practice

## 18. Scientific socialism (PE017IU)

|   |   |
|---|---|
| Course title  | SCIENTIFIC SOCIALISM ( <i>Chủ nghĩa Xã hội Khoa học</i> )   |
| Module designation  | <i>The course equips students with basic knowledge of scientific socialism.</i>   |
| Semester(s) in which the module is taught                     | 1, 2, summer semester   |
| Person responsible for the module                             | Lecturers at School of Political and Administration Sciences, VNU-HCM   |
| Language  | Vietnamese  |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, group discussion, presentation   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 85<br>Contact hours (lecture, exercise): 25<br>Private study including examination preparation, specified in hours: 60  |
| Credit points/ECTS  | 2 credits/ 3.08 ECTS  |
| Required and recommended prerequisites for joining the module | Previous courses<br>1. Marxist-Leninist political economy (PE016IU)<br>2. Marxist-Leninist philosophy (PE015IU)   |
| Module objectives   | - The subject equips students with the basic contents of scientific socialism (one of the three constituent parts of Marxism-Leninism).<br>- Help students to apply knowledge about scientific socialism creatively in cognitive and practical activities, in order to solve problems of social life of country and time. |

|                                    |   |
|------------------------------------|---|
| <p>Tentative learning outcomes</p> | <p>I. Knowledge</p> <p><i>1. Introduction to Scientific Socialism</i></p> <p>1.1. Generalize the birth of Scientific Socialism, the historical background and the role of Karl Marx and Friedrich Engels</p> <p>1.2. Recognize the basic development stages of Scientific Socialism shown in the works</p> <p>1.3. Understand the object, method and significance of the study of Scientific Socialism</p> <p><i>2. The historical mission of the working class</i></p> <p>2.1. Understand the concept of the working class and its characteristics</p> <p>2.2. Understand the content and characteristics of the historical mission of the working class</p> <p>2.3. Explain the conditions that determine the historical mission of the working class</p> <p>2.4. Analyze the similarities and differences of the working class and the implementation of the mission of the them in the world today</p> <p>2.5. Understand the basic characteristics of the Vietnamese working class and the content of the historical mission of them today</p> <p>2.6. Present the direction and some key solutions to build the working class in Vietnam today</p> <p><i>3. Socialism and the transition to socialism</i></p> <p>3.1. Understanding Socialism is the first stage of the socialist-economic form of communism</p> <p>3.2. Describe the basic features of socialism</p> <p>3.3. Explain the objective necessity of the transition to socialism and the basic features of it</p> <p>3.4. Understand the characteristics of the transition period and socialism in Vietnam, present the directions to build socialism in Vietnam today</p> <p><i>4. Democracy and the socialist state</i></p> <p>4.1. Explain the concept of democracy and the birth and development of democracy in the history of human society</p> <p>4.2. Understand the birth process and nature of socialist democracy</p> <p>4.3. Understand the birth, nature and function of the socialist state as well as the relationship between democracy and the state</p> <p>4.4. Understand the birth, development and nature of socialist democracy in Vietnam</p> <p>4.5. Present the basic characteristics and solutions to build a legal socialist state in Vietnam today</p> <p><i>5. Social structure - classes and alliances of classes and classes in the transition to socialism</i></p> <p>5.1. Present the concept of social structure - generalization and the change of class social structure during the transition to socialism</p> |
|------------------------------------|---|

5.2. Explain the inevitability of class alliances during the transition to socialism

5.3. Understand the social-class structure in Vietnam during the transitional period and present basic solutions to build and develop class alliances and social classes in Vietnam

*6. Ethnic and religious issues in the transition to socialism*

6.1. Understand the basic concepts and characteristics of the nation and the Marxist-Leninist point of view on the national issue

6.2. Present the basic characteristics of the nation in Vietnam and the viewpoints on ethnic policies of the Party and State of Vietnam.

6.3. Understanding the nature, origin, features of religion and basic principles of solving religious problems in the transition to socialism

6.4. Explain the characteristics of religion in Vietnam and the policies of the Party and State of Vietnam towards religious beliefs today

6.5. Understand the characteristics of ethnic and religious relations in Vietnam and present basic orientations to solve the relationship between ethnicity and religion in Vietnam today

**22. Project Management (PH056IU)**

|   |   |
|---|---|
| Module designation  | <i>This course is developed to provide the principal concept on project management which was characterized by the project management body of knowledge guide (PMBOK Guide). This guide emphasizes the five project process groups of initiating, planning, executing, controlling and closing, and the nine knowledge areas of project integration, scope, time, cost, quality, human resources, communication, risk, and procurement management. Students will also apply all project management knowledge in a specific satellite development project to understand more about satellite life cycle via a mini project and final report. In addition, this course also provides computer aid for project management by introducing the application of Microsoft Project and project scheduling.</i> |
| Semester(s) in which the module is taught                     | 1, 2, summer semester   |
| Person responsible for the module                             | Dr. Lê Xuân Huy   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, project.   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | None  |

|  |  |   |       |
|--|--|---|-------|

|   |   |
|---|---|
| <p>Study and examination requirements</p> | <p><i>Attendance</i></p> <p>Regular on-time attendance in this course is expected. A student will be allowed no more than three absences. It is compulsory that the students attend at least 80% of the course to be eligible for the final examination.</p> <p><i>Assignment (Literature review)</i></p> <p>Purpose: Students will use the knowledge of paraphrasing, summarizing, developing arguments, and APA styles to write a 1,000-word literature review on a research scope of their choice.</p> <p>Task:</p> <ul style="list-style-type: none"><li>- Follow guidelines on how to write a literature review.</li><li>- Use relevant academic writing skills such as paraphrasing, summarizing, developing arguments, and APA 7th Style Guidelines – see <a href="https://www.apastyle.org/">https://www.apastyle.org/</a></li><li>- Develop arguments in relation to the research scope and identify the research gap</li></ul> <p><b>Notes:</b> All papers should be typed, double-spaced, in 13-pt font, and with 1-inch margins. All papers must be original for this class. Criterion-referenced grading is used in this course.</p> <p><i>Missed Tests</i></p> <p>Students are not allowed to miss any of the tests (both Mid-term and Final). There are very few exceptions. Only with extremely reasonable excuses (eg. certified paper from doctors), students may re- take the examination.</p> <p><i>Class Behaviors</i></p> <p>Students are required to treat their studying in college as a full-time job and spend an adequate amount of time for this Writing AE2 course with approximately 8-10 hours per week (both in class and self- study). Accordingly, students are supposed to follow the obligations below:</p> <ul style="list-style-type: none"><li>- Prepare thoroughly for each class in accordance with the course syllabus and complete home assignments as the instructor's request.</li><li>- Participate fully and constructively in all course activities and discussions (if any).</li><li>- Display appropriate courtesy to all involved in the class.</li><li>- Provide constructive feedback to faculty members regarding their performance.</li></ul> <p><i>Plagiarism</i></p> <p>All forms of plagiarism and unauthorized collusion are seriously regarded and could result in penalties. Plagiarism occurs when students copy or reproduce</p> |
|---|---|

|                     | <p>people's words or ideas and then present them as students' own work without proper acknowledgement, including when students copy the work of their fellow students. Plagiarism in student submissions can be detected by:</p> <ul style="list-style-type: none"><li>• some web-based programs such as SafeAssign or Turnitin, or</li><li>• examiner's judgments with evidence of originals</li></ul> <p>The rater will review the paper to check if citations or references are provided properly. Penalties due to improper citations or references include:</p> <table><tr><th>Degree of magnitude</th><th>Description</th></tr><tr><td>Below 15%</td><td>Marked as it is.</td></tr><tr><td>15% - 25%</td><td>The score is deducted by 25%.</td></tr><tr><td>25% - 40%</td><td>The score is deducted by 50%</td></tr><tr><td>Over 40%</td><td>The score is 0.</td></tr></table> <p>Notes: Part of the test is marked as it is if no plagiarism is detected. Students who plagiarize over 40% <u>twice</u> will be prohibited from sitting the final examination.</p> <p><i>Writing Center (Room 509)</i></p> <p>Students are encouraged to visit the Writing Center or to schedule an appointment for additional help.</p> | Degree of magnitude | Description | Below 15% | Marked as it is. | 15% - 25% | The score is deducted by 25%. | 25% - 40% | The score is deducted by 50% | Over 40% | The score is 0. |
|---------------------|---|---------------------|-------------|-----------|------------------|-----------|-------------------------------|-----------|------------------------------|----------|-----------------|
| Degree of magnitude | Description   |                     |             |           |                  |           |                               |           |                              |          |                 |

## 26. Speaking AE2 (Effective Presentations) (EN012IU)

|   |  |
|---|--|
| Course designation  | <i>Giving presentations today becomes a vital skill for students to succeed not only in university but also at work in the future. Speaking AE2, therefore, provides students with the knowledge and skills needed to deliver effective presentations (informative and persuasive presentations).</i>                      |
| Semester(s) in which the course is taught                     | 1, 2, summer semester  |
| Person responsible for the course                             | Lecturers of School of Languages   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, mini presentations  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 85<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25<br>Private study including examination preparation, specified in hours: 60   |
| Credit points/ECTS  | 2 credits/3.08 ECTS  |
| Required and recommended prerequisites for joining the course | Students must complete AE1 courses   |
| Course objectives   | Speaking AE2 aims at introducing and training students in many aspects of giving a presentation: building up confidence, preparing and planning, using the appropriate language, applying effective visual aids, applying delivery techniques, dealing with questions and responding, performing body language, and so on. |

|                          |  |   |
|--------------------------|--|---|
| Course learning outcomes | Upon the successful completion of this course, students will be able to: |   |
|                          | <b>Competency level</b>  | <b>Course learning outcome (CLO)</b>  |
|                          | Knowledge  | CLO1. Understand many aspects of giving a presentation: building up confidence, preparing and planning, using the appropriate language, applying effective visual aids, applying delivery techniques, dealing with questions and responding, performing body language |
|                          | Skill  | CLO2. Prepare and deliver effective, formal, structured presentations that are appropriate to the specific environment and audience.  |
|                          | Attitude   | CLO3. Deliver both informative and persuasive speech with confidence  |

| Content   | <i>The description of the contents should clearly indicate the weighting of the content and the level.</i>  |        |         |       |  |   |         |                        |   |      |                       |   |      |                                 |   |      |                            |   |      |                 |   |      |  |   |      |  |   |   |                                     |   |      |                       |   |      |                      |   |      |                                     |   |      |               |   |      |   |   |   |

| Individual presentations for the instructor’s evaluation and advice | 4   | U      |         |       |  |   |         |                        |   |      |                       |   |      |                                 |   |      |                            |   |      |                 |   |      |  |   |      |  |   |   |                                     |   |      |                       |   |      |                      |   |      |                                     |   |      |               |   |      |   |   |   |
| Examination forms   | Oral Presentations  |        |         |       |  |   |         |                        |   |      |                       |   |      |                                 |   |      |                            |   |      |                 |   |      |  |   |      |  |   |   |                                     |   |      |                       |   |      |                      |   |      |                                     |   |      |               |   |      |   |   |   |

|                                    |   |
|------------------------------------|---|
| Study and examination requirements | <p><i>Attendance</i></p> <p>Regular on-time attendance in this course is expected. A student will be allowed no more than three absences. It is compulsory that the students attend at least 80% of the course to be eligible for the final examination.</p> <p><i>Missed Tests</i></p> <p>Students are not allowed to miss any of the tests (both Mid-term and Final). There are very few exceptions. Only with extremely reasonable excuses (e.g. certified paper from doctors), students may retake the examination.</p> <p><i>Class Behaviors</i></p> <p>Students are required to treat their studying in college as a full-time job and spend an adequate amount of time for this Speaking AE2 course with approximately 8-10 hours per week (both in class and self-study). Accordingly, students are supposed to follow the obligations below:</p> <ul style="list-style-type: none"><li>● Prepare thoroughly for each class in accordance with the course syllabus and complete home assignments as the instructor's request.</li><li>● Participate fully and constructively in all course activities and discussions (if any).</li><li>● Display appropriate courtesy to all involved in the class.</li><li>● Provide constructive feedback to faculty members regarding their performance.</li></ul> <p><i>Plagiarism</i></p> <p>Students are warned not to copy from other books or from their peers for all assessment tasks. Committing plagiarism will result in 0 point for the task. Students who plagiarize twice will be prohibited from sitting the final examination.</p> |

## CORE COURSES

### 27. Introduction to Space Engineering (PH018IU)

|   |  |
|---|--|
| Module designation  | <i>This introductory course will bring a general overview of Space Science and Engineering to students, including the background of space and solar physics and the historical development of Space Engineering throughout the XX century. Since the course is designed from the engineers' point of view, prospective students with strong interests in Space Science and Engineering will be provided with solid foundations of the field, as well as the finest motivations for the needs of Vietnam for space science, space technology and applications in the XXI century.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | Assoc. Prof. Phan Bảo Ngọc   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 85<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25<br>Private study including examination preparation, specified in hours: 60   |
| Credit points/ECTS  | 2 credits/3.08 ECTS  |
| Required and recommended prerequisites for joining the module | None   |

|  |  |   |         |
|--|--|---|---------|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to:                                    |   |         |
|  | Competency level   | Course learning outcome (CLO)   |         |
|  | Knowledge  | CLO1. Describe basic concepts and roles of Space Science and Engineering in the era of Space Exploration. |         |
|  | Skill  | CLO2. Express ideas by using the appropriate means of graphical communications or oral presentations.     |         |
|  | Attitude   | CLO3. Recognize the need of further self-learning in Space Science and Engineering.                       |         |
| Content                                      | <i>The description of the contents should clearly indicate the weighting of the content and the level.</i> |   |         |
|  | Weight: lecture session (2 hours)  |   |         |
|  | Teaching levels: I (Introduce); T (Teach); U (Utilize)   |   |         |
|  | Topic  | Weight  | Level   |
|  | Introduction and History   | 1   | I, T    |
|  | Part 1: Space Science<br>Chapter 1: Orbital Mechanics  | 2   | I, T    |
|  | Chapter 2: Planetary Science   | 2   | I, T    |
|  | Chapter 3: Space Physics   | 3   | I, T    |
|  | Part 2: Satellite Technology<br>Chapter 4: Introduction to Satellites and their Applications               | 2   | I, T    |
|  | Chapter 5: Remote Sensing  | 2   | I, T    |
|  | Chapter 6: Navigation Systems  | 2   | I, T, U |
| Chapter 7: Space Telescopes                  | 1  | I, T  |         |
| Examination forms                            | Exam   |   |         |

|                                    |  |
|------------------------------------|--|
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p>   |
| Reading list                       | <p><b>Textbooks:</b></p> <p>[1] <i>Tools of Radio Astronomy</i>, T. L. Wilson, K. Rohlfs. Huttemeister, 5th Edition, Springer</p> <p>[2] Anil K. Maini &amp; VarshaAgrawal (2011). <i>Satellite Technology Principles and Applications</i>, A John Wiley and Sons, Ltd., Publication.</p> <p><b>References:</b></p> <p>[3] <i>Galactic Astronomy (Princeton Series in Astrophysics)</i>, James Binney and Michael Merrifield, Princeton University Press</p> <p>[4] <i>Galactic Dynamics</i>, James Binney and Scott Tremaine, Princeton University Press</p> <p>[5] <i>Remote Sensing and Image Interpretation</i>, Thomas M. Lillesand and Ralph W. Kiefer, Wiley.</p> |

## 28. Earth Observation and the Environment (PH027IU)

|   |   |
|---|---|
| Module designation  | <i>This course gives students an understanding of the Earth's climate system, an appreciation of the environmental issues (water pollution, air pollution, soil pollution, etc), and also sheds light on the role of Earth's climate system, which may have on the space systems, especially the negative impacts. Some engineering approaches are suggested to suppress these negative impacts in maintaining the lifetime of the space systems in their services.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Assoc. Prof. Hồ Quốc Bằng   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, project  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | None  |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Describe components of the Earth's climate system and its impacts on environmental issues.                        |
|  | Skill   | CLO2. Explain environmental issues using the Earth's observations.  |
|  | Attitude  | CLO3. Identify the impact of the Earth's climate change and observation techniques on society and environmental issues. |

## 29. Introduction to relativity and modern physics (PH029IU)

|   |   |
|---|---|
| Module designation  | <i>This course is introductory to all theoretically fundamental aspects of Special Relativity and Early Quantum Theory. In the first part of the course, students are brought up with some experiments that lead to the special relativity concepts of objects moving at speed close to the speed of light. From there, they can develop the formalism of special relativity in both kinematics and dynamics via the discussion of moving frames of reference, Galilean and Lorentz transformations, and electromagnetism. The second part of the course will also introduce the other pillar of modern physics, quantum theory, in its early stage. Again, students will get acquainted with some experiments that led to the thoughts of quantization, the duality characteristics of the particle-wave nature of radiation, and the principle of uncertainty; and apply these foundation physics backgrounds to the quantum theory of the atom then.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Assoc. Prof. Phan Bảo Ngọc  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, assignment   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course<br>General Physics 3 (PH023IU) (or Physics 4 (PH012IU)), Calculus 2 (MA003IU)   |

|  |  |   |       |
|--|--|---|-------|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to:                                    |   |       |
|  | Competency level   | Course learning outcome (CLO)   |       |
|  | Knowledge  | CLO1. Solve physics problems of objects moving at speeds comparable to the speed of light and objects having sizes comparable to the atomic scale by using basic concepts of Special Relativity and Quantum Theory. |       |
|  | Skill  | CLO2. Express ideas by using the appropriate means of graphical communications or oral presentations  |       |
| Content                                      | Attitude   | CLO3. Recognize the need of further self-learning in Special Relativity and Quantum Theory.   |       |
|  | <i>The description of the contents should clearly indicate the weighting of the content and the level.</i> |   |       |
|  | Weight: lecture session (3 hours)  |   |       |
|  | Teaching levels: I (Introduce); T (Teach); U (Utilize)   |   |       |
|  | Topic  | Weight  | Level |
|  | Chapter 1: Background of Special Relativity  | 3   | I, T  |
|  | Chapter 2: Relativistic Kinematics   | 2   | I, T  |
|  | Chapter 3: Relativistic Dynamics   | 2   | I, T  |
|  | Chapter 4: Quantization of Energy  | 2   | I, T  |
|  | Chapter 5: The Particle Nature of Radiation  | 2   | I, T  |
|  | Chapter 6: Wave Nature of Matter and Uncertainty Principle   | 2   | I, T  |
| Chapter 7: Early Quantum Theory of Atom      | 2  | I, T  |       |
| Examination forms                            | Exam   |   |       |

|                                    |  |
|------------------------------------|--|
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |

Introduction to the Basic Concepts of Modern Physics. Springer (2007).</p>                                       |

**30. Introduction to Signals and Systems (PH032IU)**

|   |  |
|---|--|
| Module designation  | <i>Introduction to continuous- and discrete-time systems and signals, basis function representation of signals, convolution, Fourier Series, Fourier, Laplace, Z-transform theory, state space variable analysis of linear systems, basic feedback concepts.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | Dr. Tôn Thất Long  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, assignment.   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90  |
| Credit points/ECTS  | 3 credits/4.62 ECTS  |
| Required and recommended prerequisites for joining the module | Previous course<br>General Physics 2 (PH021IU) (or Physics 3 (PH015IU), Differential Equations (PH026IU or MA024IU)  |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Understand the fundamentals of signals and systems in both discrete time and continuous time domains and their representatives in practice and apply knowledge of methods (Fourier transform, Laplace transform, z transform) to analyze the characteristics of signals and system. |
|  | Skill   | CLO2. Differentiating the nature of discrete time and continuous time systems in order to devise proper methods to solve engineering problems related to these systems  |
|  | Attitude  | CLO3. Recognize the need of further self-learning in signals and systems.   |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>   |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Introduction of signal   | 1             | I, T,U       |
|                                    | System & System Properties   | 2             | I, T,U       |
|                                    | Discrete time and Continuous time Convolution methods  | 2             | I, T,U       |
|                                    | Linear Time Invariant System Properties  | 2             | I, T,U       |
|                                    | Fourier Series and Fourier Transforms  | 3             | I, T,U       |
|                                    | Laplace Transform  | 2             | I, T,U       |
|                                    | z-Transform and its properties   | 2             | I, T,U       |
|                                    | Sampling   | 1             | I, T,U       |
| Examination forms                  | Short-answer questions   |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. ### 32. Introduction to Space Communications (PH035IU)

|   |   |
|---|---|
| Module designation  | <i>This course is introductory to all fundamental aspects of Space Communications between a spacecraft (or satellites) and the ground stations. The scopes of the course cover a wide range of discussions from the satellite's technological designs and technical solutions to its communications with the controlled-ground stations. In the first part of the course, students will study the essential characteristics and components of satellites, the satellite launching methods, the satellite orbits (mainly concentrating on the geostationary satellites), and the satellite orbital perturbations; nevertheless, in the second part, the learning contents will focus on the analog and digital signals, transmissions, receptions, link equations, and satellite services.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Nguyễn Ngọc Trường Minh   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, project  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: General Physics 2 (PH021IU) or Physics 3 (PH015IU)   |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1. Apply the knowledge of mathematics and physics to solve engineering problems.<br><br>CLO2. Demonstrate the understanding of the fundamental principles of satellite communications, satellite orbits, and satellite designs. |
|  | Skill   | CLO3. Show abilities of expressing ideas using graphical communications or oral presentations  |
|  | Attitude  | CLO4. Show the role and responsibility of an engineer in society   |

|                   |  |               |              |

### 33. Remote Sensing (PH036IU)

|   |   |
|---|---|
| Module designation  | <i>In this course, students will be able to extract physical information of the Earth's surface using remote sensing, applying for forestry, agriculture, water resources, and environment. Wavelength ranges used in this course are ultraviolet, visible, short-wavelength infrared, thermal infrared, and microwave.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Phan Hiền Vũ  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, assignment.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: General Physics 3 (PH023IU)<br>Parallel Course: General Physics 3 Laboratory (PH024IU)   |

|  |   |  |  |
|--|---|--|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |  |
|  | Knowledge   | CLO1. Explain geophysical measurements derived from remotely sensed data with a wide range from visible to microwave wavelengths<br><br>CLO2. Develop applications in forest, agriculture, water resources and environment using remote sensing data |  |
|  | Skill   | CLO3. Classify land surface from optical and thermal remote sensing images   |  |
|  | Attitude  | CLO4. Show the impact of remote sensing techniques for natural resource and environmental management, and sustainable development.   |  |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>   |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Chapter 1: Introduction to Concepts and Systems  | 2             | T            |
|                                    | Chapter 2: Photographs and Digital Images from Aircraft and Satellites   | 3             | T            |
|                                    | Chapter 3: Earth Resource and Environmental Satellites   | 3             | T            |
|                                    | Chapter 4: Thermal Infrared Images   | 2             | T            |
|                                    | Chapter 5: Radar Technology and Terrain Interactions   | 2             | T            |
|                                    | Chapter 6: Forest, agricultural, water resources and environmental applications  | 3             | T            |
| Examination forms                  | Exam   |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |               |              |

|              |   |

### 34. Space Environment (PH037IU)

|   |  |
|---|--|
| Module designation  | <i>This is an introductory course of physical properties of plasma; the solar atmosphere; the solar dynamo; the magnetic field and the ionosphere of the Earth; the interaction between the solar wind and the magnetic field of the Earth; the impact of the ionosphere on satellite communication.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | Assoc. Prof. Phan Bảo Ngọc   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, practice  |
| Workload (incl. contact hours, self-study hours)              | <p>(Estimated) Total workload: 127.5</p> <p>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5</p> <p>Private study including examination preparation, specified in hours: 90</p>   |
| Credit points/ECTS  | 3 credits/4.62 ECTS  |
| Required and recommended prerequisites for joining the module | Parallel Course: General Physics 2 (PH014IU) (or Physics 3 (PH015IU))  |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1: Demonstrate fundamental concepts of plasma, solar physics such as solar atmosphere, solar activities, and solar dynamo, geomagnetism and Earth's ionosphere. |
|  | Skill   | CLO2: Explain the physical processes in space such as the interaction between the solar wind and Earth's magnetic fields.  |
|  | Attitude  | CLO3: Identify the impact of space environment on satellite communication, emerging space technologies, and on solutions to typical problems in space engineering. |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>   |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Part A: Atmospheric structure and physical processes in some regions of space<br>Chapter 1: Plasma Physics   | 2             | I, T         |
|                                    | Chapter 2: Solar physics   | 3             | I, T         |
|                                    | Chapter 3: Solar Wind  | 3             | I, T         |
|                                    | Chapter 4: Geomagnetism  | 2             | I, T         |
|                                    | Chapter 5: Magnetosphere   | 2             | I, T         |
|                                    | Chapter 6: Neutral Atmosphere  | 2             | I, T         |
|                                    | Chapter 7: Ionosphere  | 1             | T, U         |
| Examination forms                  | Exam   |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |               |              |

### 35. Satellite technology (PH040IU)

|   |  |
|---|--|
| Module designation  | <i>This course is introductory to general knowledge about satellites, including two parts separately of satellite technology and applications. The first part of the course will introduce students to the fundamental topics of satellite technology, satellite orbits, and satellite launching. The second part of the course focuses mostly on satellite applications, including communication techniques, remote sensing, navigation, weather satellites, and military satellites.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | Dr. Lê Xuân Huy  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, project   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90  |
| Credit points/ECTS  | 3 credits/4.62 ECTS  |
| Required and recommended prerequisites for joining the module | None   |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1. Show the understanding of main satellite applications for developing and functioning satellite/spacecraft systems.<br><br>CLO2. Show basic knowledge of designing payloads, instruments, and bus systems of a satellite/spacecraft mission |
|  | Skill   | CLO3. Express the ability of teamwork skills   |
|  | Attitude  | CLO4. Recognize the state of space business and space industry in the world and in Vietnam.  |

|                   |  |               |              |
|-------------------|--|---------------|--------------|
| Content           | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |
|                   | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                   | Introduction to Satellite technologies and Application   | 1             | I, T         |

**36. iOS Programming Fundamentals (PH055IU)**

|   |  |
|---|--|
| Module designation  | <i>This course provides students with an introduction to programming on the iOS platform with Swift Programming language including: environment, syntax, data types, variables, tuples, constants, literals, operators, decision making, loops, strings, arrays, sets, functions, classes, properties, methods, OOP concepts, App development methodologies, UI designs.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | MSc. Trương Thị Ngọc Phượng  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, project, practice   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 182.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5, laboratory: 25<br>Private study including examination preparation, specified in hours: 120   |
| Credit points/ECTS  | 4 credits (3theory + 1 practice)/6.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: Programming for Engineers (EE057IU)   |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1. Apply the knowledge of informatics to solve engineering problems.<br><br>CLO2. Apply the Swift Language to develop iOS applications. |
|  | Skill   | CLO3. Implement programs on iOS using the Swift language and app development tools.  |
|  | Attitude  | CLO4. Recognize the legality, professional ethics and responsibilities, and norms of developing and using the software.                    |

|         |  |               |              |
|---------|--|---------------|--------------|
| Content | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (5 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |

**37. Introduction to Digital Image Processing (PH038IU)**

|   |   |
|---|---|
| Module designation  | <i>This course will introduce students to essential basic knowledge of creating, visualizing, and manipulating digital images by computer. Topics will include representation of two-dimensional (2D) data, time and frequency domain representations, filtering and enhancement, the Fourier transform, convolution, interpolation, color images, and preliminary knowledge in object recognition and description.</i> |
| Semester(s) in which the module is taught                     | 1,2   |
| Person responsible for the module                             | Dr. Hồ Đình Duẩn  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, homework.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 85<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25<br>Private study including examination preparation, specified in hours: 60  |
| Credit points/ECTS  | 2 credits/3.08 ECTS   |
| Required and recommended prerequisites for joining the module | None  |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1: Apply systematically the theoretical aspects of imaging systems in designing, manipulating, and creating 2D digital images. |
|  | Skill   | CLO2: Use advanced imaging techniques to create, visualize and manipulate digital images.   |
|  | Attitude  | CLO3: Show the role and responsibilities of an engineer in related fields.  |

|                   |  |               |              |
|-------------------|--|---------------|--------------|
| Content           | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |
|                   | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                   | Introduction and organization, physics of vision, resolution, impulse response   | 1             | I, T         |
|                   | Linear systems, matrix transformations, scaling, translation, rotations and other geometric transformation; image registration and interpolation   | 1             | I, T         |
|                   | Contrast and gray levels, histograms, Gaussian, and other non-linear stretches   | 1             | I, T         |
|                   | Convolution, simple filters, edge detection  | 1             | I, T         |
|                   | The frequency domain, power spectral density, the FFT  | 1             | I, T         |
|                   | Digital filtering, image enhancement, noise  | 1             | I, T         |
|                   | The fast Fourier transforms  | 1             | I, T         |
|                   | The convolution theorem  | 1             | I, T         |
|                   | Color representation, RGB, HSI, 24 bit and 8 bit color tables  | 1             | I, T         |
|                   | 3D information, perspective plots  | 1             | I, T         |
|                   | Topography and shaded relief display, contours, parallax, and stereo   | 1             | I, T         |
|                   | Image morphing   | 1             | I, T         |
|                   | Interpolation  | 1             | I, T         |
|                   | Fitting smooth functions to sparse data, least-squares   | 1             | I, T         |
|                   | False color images, principal components analysis  | 1             | I, T         |
| Examination forms | Exam   |               |              |

|                                    |  |
|------------------------------------|--|
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p>   |

**38. Digital Image Processing Laboratory (PH039IU)**

|   |   |
|---|---|
| Module designation  | <i>This course gives students computer-based laboratory exercises designed to introduce methods of real-world data manipulation. The lab exercises will introduce various imaging processing topics, which could be completed with many widely used programming languages such as Matlab, C, or Python.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Hồ Đình Duẩn  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Laboratory report.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 55<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): laboratory: 25<br>Private study including examination preparation, specified in hours: 30   |
| Credit points/ECTS  | 1 credit/2 ECTS   |
| Required and recommended prerequisites for joining the module | Parallel Course: Introduction to Digital Image Processing (PH038IU)   |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Apply the basic knowledge of digital imaging processing and manipulating on computers in designing, manipulating, and creating 2D digital images. |
|  | Skill   | CLO2. Use many widely used programming languages such as Matlab, C/C++, or Python at advanced levels.   |
|  | Attitude  | CLO3. Show the legal issues and responsibilities in engineering practice.   |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: laboratory session (4 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>  |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Viewing digital images, bits and bytes, raster scan format, quantization   | 1             | T, U         |
|                                    | Scaling, translation and rotation, sums and differences  | 1             | T, U         |
|                                    | Histograms and stretches, convolutional filters  | 1             | T, U         |
|                                    | Fourier transforms and the frequency domain, filters   | 1             | T, U         |
|                                    | FFTs, Image filtering: smoothing and sharpening  | 1             | T, U         |
|                                    | 2D convolution and correlation   | 1             | T, U         |
|                                    | Color and color tables   | 1             | T, U         |
|                                    | Creating multiple image sequences for the project  | 1             | T, U         |
| Examination forms                  | Exam   |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |               |              |

|              |   |

**39. Optics and Photonics (PH031IU)**

|   |  |
|---|--|
| Module designation  | <i>This course will cover the basics of physical optics and photonics, the applications of photonics such as fiber optic communication and photon detectors.</i>   |
| Semester(s) in which the course is taught                     | 1, 2   |
| Person responsible for the course                             | Dr. Trịnh Xuân Thắng   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, assignment, homework  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 85<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25<br>Private study including examination preparation, specified in hours: 60 |
| Credit points/ECTS  | 2 credits/3.08 ECTS  |
| Required and recommended prerequisites for joining the module | Previous Course: General Physics 3 (PH023IU) (or Physics 4 (PH012IU)), or Analytical Physics IIB (IS014IU)   |

|                          |   |  |       |
|--------------------------|---|--|-------|
| Course learning outcomes | Upon the successful completion of this course students will be able to:   |  |       |
|                          | Competency level  | Course learning outcome (CLO)  |       |
|                          | Knowledge   | CLO1. Apply knowledge of optics and photonics into photonics applications such as fiber optic communication and photon detectors |       |
|                          | Skill   | CLO2. Express ideas using the appropriate means of graphical communications or oral presentations                                |       |
|                          | Attitude  | CLO3. Recognize the need of further self-learning in optics and photonics.   |       |
| Content                  | <i>The description of the contents should clearly indicate the weighting of the content and the level.</i><br>Weight: lecture session (2 hours)<br>Teaching levels: I (Introduce); T (Teach); U (Utilize) |  |       |
|                          | Topic   | Weight   | Level |
|                          | Chapter 1: Nature of light  | 2  | I, T  |
|                          | Chapter 2: Light propagation I  | 2  | T     |
|                          | Chapter 3: Light propagation II   | 2  | T, U  |
|                          | Chapter 4: Fourier optics   | 2  | T, U  |
|                          | Chapter 5: Optical fibre  | 2  | T, U  |
|                          | Chapter 6: Physics of lasers  | 1  | T, U  |
|                          | Chapter 7: Semiconductor photon sources   | 2  | T, U  |

## MAJOR COURSES

### 40. Big Data Analytics for Remote Sensing (PH053IU)

|   |   |
|---|---|
| Module designation  | <i>The aim of the course is to get students familiar with high-performance computing aspects of remote sensing. Students will learn how to discover knowledge from remote sensing data with high-performance computing approaches and data visual analytics tools (Apache Hadoop, parallel Python, R, Google Earth Engine).</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Lê Thanh Vân  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, assignment, project.   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous Course:<br>Programming for engineers (EE057IU),<br>Earth Observation and Environment (PH027IU),<br>Remote Sensing (PH036IU)  |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Develop algorithms of analyzing big data in remote sensing using high-performance computing approaches and data visual analytics tools. |
|  | Skill   | CLO2. Analyze data to make conclusions to engineering problems in big data and remote sensing.  |
|  | Attitude  | CLO3. Show abilities of further self-learning and lifelong learning.  |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>   |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Introduction to remote sensing big data  | 1             | I, T         |
|                                    | Infrastructure and high-performance computing for remote sensing data  | 2             | I, T         |
|                                    | Hadoop and Map Reduce  | 2             | I, T         |
|                                    | Distributed database   | 1             | T, U         |
|                                    | The computing platforms: parallel computing (CPUs and GPUs), Cloud computing   | 1             | T, U         |
|                                    | Python for Big Data  | 2             | T, U         |
|                                    | R - advanced spatial statistics for remote sensing big data  | 1             | T, U         |
|                                    | Remote sensing image handling: Image Enhancement, Data Mining  | 2             | T, U         |
|                                    | The open platform: Google Earth Engine   | 2             | T, U         |
|                                    | Final project: Thematic mapping from remote sensing big data   | 1             | U            |
| Examination forms                  | Short answer question, project.  |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |               |              |

## 42. Navigation systems (PH047IU)

|   |  |
|---|--|
| Module designation  | <i>This course introduces the principles of space navigation systems based on inertial sensors and satellite navigation. Students will start with a development history of many global navigation satellite systems (GNSS) such as GPS, GLONASS, EGNOS, Galileo, etc. and then will build upon the modern navigation systems, GPS, with Coordinate Frames, Time Reference, and Orbits to estimate the position, velocity, and times, as well as their errors. Besides, the course also provides the learners with based knowledge of GPS signals and GPS Signal Conditioning and Acquisition utilizing the Fourier transformation and convolution.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | Dr. Nguyễn Chánh Nghiệm, Dr. Lương Bảo Bình  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, lesson, project, exam.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90  |
| Credit points/ECTS  | 3 credits/4.62 ECTS  |
| Required and recommended prerequisites for joining the module | None   |

|  |  |   |       |
|--|--|---|-------|
| Module objectives/intended learning outcomes   | Upon the successful completion of this course students will be able to:  |   |       |
|  | Competency level   | Course learning outcome (CLO)   |       |
|  | Knowledge  | CLO1: Show the understanding of operation of global navigation satellite systems, e.g. GPS.   |       |
|  | Skill  | CLO2: Analyze the GPS data for geolocation on the Earth surface from receivers e.g. handheld devices, base stations and RTK rovers. |       |
|  | Attitude   | CLO3: Show the impact of GNSS in society and environments.  |       |
| Content  | <i>The description of the contents should clearly indicate the weighting of the content and the level.</i>                                 |   |       |
|  | Weight: lecture session (3 hours)  |   |       |
|  | Teaching levels: I (Introduce); T (Teach); U (Utilize)   |   |       |
|  | Topic  | Weight  | Level |
|  | Part 1: Fundamentals<br>Chapter 1: Introduction<br>Overview of navigation principles<br>Typical applications, Axis systems and projections | 1   | I, T  |
| Chapter 2: Inertial Navigation Systems<br>Principles of inertial navigation<br>Accelerometers, gyroscopes, specific technologies such as Ring Laser Gyros<br>Axis transformations and mechanization of IN equations, Errors in inertial navigation | 1  | T   |       |
| Chapter 3: GPS: An overview<br>Objectives, Policies, and Status<br>System Architecture, Signals<br>Receivers, Measurements, and Performance<br>Applications  | 1  | T   |       |

|                   |  |   |      |
|-------------------|--|---|------|
|                   | Chapter 4: GNSS<br>Development history: GNSS, GPS, GLONASS, EGNOS, Galileo<br>GPS system architecture (ground, space, user segment), Code (CDMA) and carrier techniques  | 2 | T, U |
|                   | Chapter 5: GPS Coordinate Frames, Time Reference, and Orbits<br>Global Coordinate Systems<br>Time References and GPS Time<br>GPS Orbits and Satellite Position Determination   | 2 | T, U |
|                   | Part 2: Estimation of Position, Velocity, and Time<br>Chapter 6: GPS Measurements and Error Sources<br>Measurement Models<br>Control Segment Errors: Satellite Clock and Ephemeris, Signal Propagation Modeling Errors<br>Measurement Errors | 1 | U    |
|                   | Chapter 7: PVT Estimation<br>Position Estimation with Pseudoranges<br>Position and Velocity from Pseudorange Rates<br>Time Transfer  | 1 | T, U |
|                   | Part 3: GPS Signals<br>Chapter 8: Signals and Linear Systems<br>Overview, Convolution<br>Transfer Functions and Basis Functions<br>Fourier Series, Fourier Transform<br>Random Signals, Laplace Transform                                    | 1 | T, U |
|                   | Chapter 9: GPS Signals   | 1 | T, U |
|                   | Chapter 10: Signal-to-Noise Ratio and Ranging Precision  | 2 | T, U |
|                   | Part 4: Receivers<br>Chapter 11: Signal Conditioning and Acquisition<br>Signal Conditioning<br>Signal Acquisition<br>Statistical Analysis of Signal Acquisition  | 2 | T, U |
| Examination forms | Project/Written examination  |   |      |

### 43. Geolocation App Development for iOS (PH057IU)

|   |  |
|---|--|
| Module designation  | <i>This course provides students with an introduction to programming on the iOS platform with Swift Programming language for location-based services apps, including Core Location services, Maps, Region monitoring, iBeacon, Compass Heading, Geocoding, Error Handling, and Firebase. In addition, this course gives students skills to design, implement &amp; debug a program for the iOS platform.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | MSc. Trương Thị Ngọc Phượng  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, Laboratory, project.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 182.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5, laboratory: 25<br>Private study including examination preparation, specified in hours: 120   |
| Credit points/ECTS  | 4 credits (3theory + 1 practice)/6.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: iOS Programming fundamentals (PH055IU)  |

**44. Digital Signal Processing (EE092IU)**

|   |   |
|---|---|
| Module designation  | <i>This course is an introduction to the basic principles, methods, and applications of digital signal processing, emphasizing its algorithmic, computational, and programming aspects. In particular, the students will learn the conversion from analog to digital, the concepts of discrete time linear systems, filtering, spectral analysis of discrete time signals and filter design</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Huỳnh Võ Trung Dũng   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, assignment.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: Introduction to Signals and Systems (PH032IU)  |

#### 45. Digital Signal Processing Laboratory (EE093IU)

|   |   |
|---|---|
| Module designation  | <i>This course is an introduction to the basic principles, methods, and applications of digital signal processing, emphasizing its algorithmic, computational, and programming aspects.</i>                         |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Huỳnh Võ Trung Dũng   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, Experiment, assignment   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 55<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): laboratory: 25<br><br>Private study including examination preparation, specified in hours: 30 |
| Credit points/ECTS  | 1 credits/2 ECTS  |
| Required and recommended prerequisites for joining the module | Parallel course: Digital Signal Processing (EE092IU)  |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1. Design and implement digital signal processing algorithms in MATLAB software.  |
|  | Skill   | CLO2. Optimize the programming code for having better performance of DSP projects.<br><br>CLO3. Solve the problems efficiently by individual and by group.<br><br>CLO4. Present the application of DSP algorithms in signal processing filed |
|  | Attitude  | CLO5. Confidence and fluency in discussing digital signal processing in English  |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: laboratory session (4 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>  |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Sampling and reconstruction of analog signals  | 1             | T, U         |
|                                    | Sampling, Quantizing and Coding  | 1             | T, U         |
|                                    | Z transform  | 1             | T, U         |
|                                    | Z transform and Transfer Function  | 1             | T, U         |
|                                    | Fourier Analysis of Discrete-Time Signals  | 1             | T, U         |
|                                    | Frequency Response   | 1             | T, U         |
|                                    | Review and Final Exam  | 2             | T, U         |
| Examination forms                  | Written Exam   |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |               |              |
| Reading list                       | <p><b>Textbooks:</b></p> <p>[1] S J.Orfanidis, <i>Introduction to Signal Processing</i>, Prentice–Hall, 1996, ISBN 0-13-209172-0</p> <p>[2] M. D. Lutovac, D. V. Tošić, B. L. Evans, <i>Filter Design for Signal Processing Using MATLAB and Mathematica</i>, Prentice Hall, 2001</p> <p>[3] Lab manual</p>              |               |              |

**46. Digital image processing (PH041IU)**

|   |   |
|---|---|
| Module designation  | <i>This course provides advanced topics in digital image processing. In-class students will be provided in-depth theoretical knowledge of professional themes, including segmentation, morphological image processing, linear image filtering, imaging correlation, imaging transforms, eigenimage, multiresolution image processing, noise reduction and restoration, feature extraction, and recognition tasks.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Hồ Đình Duẩn  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: Introduction to Digital Image Processing (PH038IU)   |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1. Develop algorithms for digital image analysis and interpretation in engineering areas. |
|  | Skill   | CLO2. Analyze digital images using various platforms and programming languages.              |
|  | Attitude  | CLO3. Show abilities of further self-learning and lifelong learning.                         |

|         |  |               |              |
|---------|--|---------------|--------------|
| Content | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |
|         | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|         | Introduction   | 1             | I, T         |
|         | Point Operations, local and global operations for image segmentation.  | 1             | I, T         |
|         | Differential operators for segmentation: Gradient and Laplacian.   | 1             | I, T         |
|         | Histograms revisited and Statistics-based segmentation.  | 1             | I, T         |
|         | Color Science.   | 1             | I, T         |
|         | Feature representation.  | 1             | I, T         |
|         | Morphological Image Processing.  | 1             | I, T         |
|         | Linear Image Processing and Filtering.   | 1             | I, T         |
|         | Template Matching.   | 1             | I, T         |
|         | Eigen images.  | 1             | I, T         |
|         | Feature descriptors.   | 1             | I, T         |
|         | Fourier and Morphology-based descriptors.  | 1             | I, T         |
|         | Scale-Space Image Processing.  | 1             | I, T         |
|         | Feature-based Methods for Image Matching.  | 1             | I, T         |
|         | Image classification and simple recognition.   | 1             | U            |

| Examination forms                  | Project /Exam.  |
|------------------------------------|---|
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p>  |

#### 47. Satellite Signal and Image Processing Laboratory (PH043IU)

|   |  |
|---|--|
| Module designation  | <i>This course provides students with experiments on transmitting the collected data from satellites to ground-based stations, then performing post-processing data on the ground. Participating students will have a chance to learn how to operate and control satellites and equip them with project management skills.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | Dr. Lê Xuân Huy  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Lecture, experiment, project.  |
| Workload (incl. contact hours, self-study hours)              | <p>(Estimated) Total workload: 152.5</p> <p>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 12.5; laboratory session: 50</p> <p>Private study including examination preparation, specified in hours: lecture: 30; laboratory session: 60</p>                                      |
| Credit points/ECTS  | 3 (1 theory + 2 practice) credits/5.54 ECTS  |
| Required and recommended prerequisites for joining the module | <p>Parallel course:</p> <p>Digital signal processing (EE092IU)</p> <p>Introduction to Digital Image processing (PH038IU)</p>   |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Analyze processes of operating a satellite system, and collecting, transmitting and post-processing its data.                   |
|  | Skill   | CLO2. Experiment controlling components of a satellite system model and processing its data.<br>CLO3. Show abilities of team working. |
|  | Attitude  | CLO4. Show the impact of satellite-based technological solutions in support of societal and environmental management.                 |

|   |  |               |              |
|---|--|---------------|--------------|
| Content   | <i>The description of the contents should clearly indicate the weighting of the content and the level.</i> |               |              |
|   | Weight: lecture session (3 hours)  |               |              |
|   | Teaching levels: I (Introduce); T (Teach); U (Utilize)   |               |              |
|   | Part A: Theory section   |               |              |
|   | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|   | An introduction of satellite signal and image processing course  | 1             | I, T         |
|   | An introduction of satellite system design, verification and validation process                            | 1             | I, T         |
|   | An introduction Functions Test Process   | 1             | I, T         |
|   | Function Test in practice: Electrical Power Unit, On-board computer, signal transmission                   | 1             | I, T         |
|   | An introduction to system integration design process   | 1             | I, T         |
|   | Part B: Practical section  |               |              |
|   | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|   | Bus System Integration: Onboard Computer, Signal Transmitter and Power Supply Unit.                        | 2             | T, U         |
|   | Bus System Integration: ADCS components  | 2             | T, U         |
|   | Payload System Integration   | 1             | T, U         |
| An introduction for system test process   | 1  | T, U          |              |
| System test in practice: ADCS: Earth pointing, Mission Scenarios planning, Payload operation: Image capture, Data transmission: S-band transmitting, Data post processing | 4  | T, U          |              |

|                                    |   |
|------------------------------------|---|
| Examination forms                  | Project.  |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p>  |

#### 48. Antenna and Microwave Engineering (EE105IU)

|   |   |
|---|---|
| Module designation  | <i>The course provides students the understanding of radiation fundamentals, linear antennas, point source arrays, aperture antennas, antenna impedance, and antenna systems. Basic concepts of microwave engineering such as transmission lines, Smith plot, microwave circuits, analysis techniques, design and applications.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | MSc. Trần Văn Sư  |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Lecture, lesson, assignment.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course: General Physics 2 (PH021IU) (or Physics 3 (PH015IU) or Electromagnetic Theory (EE010IU))   |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CLO1. Collect in depth the principles of antenna radiation and radiation characteristics (input impedance, gain, half power beam width, and radiation power...). |
|  | Skill   | CLO2. Analyze the specific antennas such as: dipoles, loop, parabolic antennas and the antenna arrays  |
|  | Attitude  | CLO3. Analyze and design topics of microwave engineering such as transmission line, Smith chart, scattering matrix   |

|                   |  |               |              |
|-------------------|--|---------------|--------------|
| Content           | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |
|                   | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                   | Introduction and a Historical Perspective  | 1             | I, T,U       |
|                   | Antenna radiation characteristics: Input impedance, efficiency, radiation power  | 2             | I, T,U       |
|                   | Antenna radiation characteristics: radiation patterns, wave polarization, half power beam-width, gain, receiving antenna and antenna link.   | 1             | I, T,U       |
|                   | Current radiate field, Maxwell's Equations and Source-Field Relationships, Hertzian dipoles, small loop antennas.  | 1             | I, T,U       |
|                   | Finite length dipoles, line sources, ground planes and monopoles.  | 1             | I, T,U       |
|                   | Linear arrays, array factor.   | 1             | I, T,U       |
|                   | Broadside and endfire arrays. Planar arrays and pattern multiplication.  | 2             | I, T,U       |
|                   | Transmission line equations and properties. Standing Wave Patterns And VSWR. Introduction to Smith chart.  | 1             | I, T,U       |
|                   | Impedance matching techniques.   | 2             | I, T,U       |
|                   | Microwave engineering, scattering matrix.  | 1             | I, T,U       |
|                   | Low noise amplifier, power amplifier, Power divider, couplers, filters.  | 1             |              |
|                   | Review   | 1             |              |
| Examination forms | Written Exam   |               |              |

|                                    |  |
|------------------------------------|--|
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |
| Reading list                       | <p><b>Textbook:</b></p> <p>[1] Class notes</p> <p><b>Reference:</b></p> <p>[2] C.A. Balanis, Antenna Theory Analysis and Design, John Wiley &amp; Sons, 1997</p>   |

**49. Antenna and Microwave Engineering Laboratory (EE124IU)**

|   |  |
|---|--|
| Module designation  | <i>Antenna &amp; Microwave Engineering Practical Workbook covers a variety of experiments that are designed to aid students in their profession and theory. They include a variety of topics which include antennas, transmission lines and microwave waveguides. A practical exposure to such equipment is necessary as it builds on the theory taught to students.</i> |
| Semester(s) in which the module is taught                     | 1, 2   |
| Person responsible for the module                             | MSc. Trần Văn Sư   |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Laboratory, lesson, assignment.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 55<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): laboratory: 25<br><br>Private study including examination preparation, specified in hours: 30  |
| Credit points/ECTS  | 1 credits/2 ECTS   |
| Required and recommended prerequisites for joining the module | Parallel course: Antenna and Microwave Engineering (EE105IU)   |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Use simulation software to design antennas  |
|  | Skill   | CLO2. Define and analyze the radiation characteristics of antennas (input impedance, gain, half power beam width, and radiation power, polarization...).<br><br>CLO3. Measure and record the experimental data, analyze the results, and prepare a formal laboratory report.<br><br>CLO4. Explain to colleagues, through both written and verbal presentations, technical materials as presented in this course |
|  | Attitude  | CLO5. Analyze and design topics of microwave engineering such as transmission line, Smith chart, scattering matrix  |

|                                    |  |               |              |
|------------------------------------|--|---------------|--------------|
| Content                            | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: laboratory session (4 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p>  |               |              |
|                                    | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                                    | Dipole antenna simulation using HFSS   | 1             | I, T,U       |
|                                    | Patch antenna simulation using HFSS  | 1             | I, T,U       |
|                                    | Experimentation with Pyramidal horn and Helical antennas   | 1             | I, T,U       |
|                                    | Standing Wave & SWR Measurements.  | 1             | I, T,U       |
|                                    | Transmission lines   | 1             | I, T,U       |
|                                    | Matching and transformation network.   | 1             | I, T,U       |
|                                    | Introduction to RF Anechoic chamber and Network analyzer equipment   | 1             | I, T,U       |
|                                    | Review   | 1             | T,U          |
| Examination forms                  | Exam   |               |              |
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p> |               |              |

**50. Research Project (PH042IU)**

|   |   |
|---|---|
| Course designation  | <i>This course provides the research project for students, which improves their skills in doing research and has experience in a practical project.</i> |
| Semester(s) in which the course is taught                     | 1, 2  |
| Person responsible for the course                             | Assoc. Prof. Phan Bảo Ngọc<br>Dr. Phan Hiền Vũ<br>MSc. Lê Thị Quế   |
| Language  | English   |
| Relation to curriculum  | Compulsory  |
| Teaching methods  | Project   |
| Workload (incl. contact hours, self-study hours)              | 12 weeks (180 hours)  |
| Credit points/ECTS  | 4 credits/6.56 ECTS   |
| Required and recommended prerequisites for joining the module | None  |

|                                    |   |  |
|------------------------------------|---|--|
| Course learning outcomes           | Upon the successful completion of this course students will be able to:   |  |
|                                    | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|                                    | Skill   | CLO1. Perform experiments, analyze data, and interpret results to get practical experience in working<br>CLO2. Cooperate effectively in a team.<br>CLO3. Show abilities of effective written and oral communication.   |
|                                    | Attitude  | CLO4. Show the understanding of the role and responsibility of an engineer in society.<br>CLO5. Show abilities of further self-learning and lifelong learning.<br>CLO6. Show the awareness of the legal issues and responsibilities, the commitment to professional ethics and responsibilities, and the norms of developing and using software. |
| Content                            | A group of four or five students choose one of the research projects assigned by professors. The topic is in two fields:<br><br>- Space Science<br>- Space Engineering  |  |
| Examination forms                  | Report and presentation   |  |
| Study and examination requirements | Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.<br><br>Assignments/Examination: Students must have more than 50/100 points overall to pass this course. |  |
| Reading list                       | <i>No textbook required</i>   |  |

**51. Internship (PH044IU)**

|   |  |
|---|--|
| Course designation  | <i>Students will start their internship at space center, satellite center and company relating to satellite science and satellite engineering.</i> |
| Semester(s) in which the course is taught                     | Summer of third year   |
| Person responsible for the course                             | Assoc. Prof. Phan Bảo Ngọc<br>Dr. Phan Hiền Vũ<br>MSc. Lê Thị Quế  |
| Language  | English  |
| Relation to curriculum  | Compulsory   |
| Teaching methods  | Project, practice  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 135 hours  |
| Credit points/ECTS  | 3 credits/4.92 ECTS  |
| Required and recommended prerequisites for joining the module |  |

|                                    |   |  |
|------------------------------------|---|--|
| Course learning outcomes           | Upon the successful completion of this course students will be able to:   |  |
|                                    | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|                                    | Skill   | CLO1. Perform experiments, analyze data, and interpret results to get practical experience in working<br>CLO2. Cooperate effectively in a team.<br>CLO3. Communicate effectively in the working environment.   |
|                                    | Attitude  | CLO4. Show the understanding of the role and responsibility of an engineer in society.<br>CLO5. Show abilities of further self-learning and lifelong learning.<br>CLO6. Show awareness of legal issues and responsibilities, the commitment to professional ethics and responsibilities, and norms of developing and using software. |
| Content                            | Students will follow the guidance of the instructors from space center/satellite center/company.  |  |
| Examination forms                  | Report and presentation   |  |
| Study and examination requirements | Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.<br><br>Assignments/Examination: Students must have more than 50/100 points overall to pass this course. |  |
| Reading list                       | Documents, notes from space center/ satellite center  |  |

**52. Thesis (PH050IU)**

|  |  |
|--|--|
| Course designation                               | <i>The topics of the thesis focus on space engineering, especially satellite technology and satellite application. Students have a deep understanding about theoretical knowledge and application. Students will also become familiar with research topics, ways of argument and making points according to the research process, which will help them develop a more academic perspective</i> |
| Semester(s) in which the course is taught        | 1, 2   |
| Person responsible for the course                | Assoc. Prof. Phan Bảo Ngọc<br>Dr. Phan Hiền Vũ<br>MSc. Lê Thị Quế  |
| Language   | English  |
| Relation to curriculum                           | Compulsory   |
| Teaching methods                                 | Project  |
| Workload (incl. contact hours, self-study hours) | 12 weeks (450 hours)   |
| Credit points/ECTS                               | 10 credits/16.4 ECTS   |
| Previous Course                                  | - Successfully finish at least 90% over the total numbers of credits of the academic program<br>- Do not be under any academic warning   |

|                                    |   |   |
|------------------------------------|---|---|
| Course learning outcomes           | Upon the successful completion of this course students will be able to:   |   |
|                                    | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|                                    | Skill   | <p>CLO1. Perform experiments, analyze data, interpret results, and make conclusions for a practical problem.</p> <p>CLO2. Show abilities of effective written and oral communication</p>  |
|                                    | Attitude  | <p>CLO3. Show an understanding of the role and responsibility of an engineer in society.</p> <p>CLO4. Show abilities of further self-learning and lifelong learning.</p> <p>CLO5. Show an awareness of the legal issues and responsibilities, the commitment to professional ethics and responsibilities, and the norms of developing and using software.</p> |
| Content                            | <p>The topic is in two fields:</p> <ul style="list-style-type: none"> <li>- Space Science</li> <li>- Space Engineering</li> </ul> |   |
| Examination forms                  | Thesis report and presentation  |   |
| Study and examination requirements | Following the Thesis Guideline of Department of Physics   |   |
| Reading list                       | <i>Depending on the topic</i>   |   |

## ELECTIVE COURSES

### 53. Geographic Information System (GIS) and Spatial Analysis (PH046IU)

|   |   |
|---|---|
| Module designation  | <i>This course will focus on the concepts and techniques of GIS. Students will be familiar with data models and structures, database management and spatial analysis and modeling.</i>                                      |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Phan Hiền Vũ  |
| Language  | English   |
| Relation to curriculum  | Elective  |
| Teaching methods  | Lecture, lesson, homework.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 140<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25, practice: 25<br>Private study including examination preparation, specified in hours: 90 |
| Credit points/ECTS  | 3 (2 theory + 1 practice) credits/5.08 ECTS   |
| Required and recommended prerequisites for joining the module | None  |

|  |   |  |
|--|---|--|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |  |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>   |
|  | Knowledge   | CL01. Design geospatial data structure for management information systems.   |
|  | Skill   | CL02. Analyze geospatial data using QGIS tools   |
|  | Attitude  | CL03. Show an understanding of the role and responsibility of an engineer in fields related to geospatial data.<br>CL04. Show abilities of further self-learning and long-life learning. |

|                   |  |               |              |
|-------------------|--|---------------|--------------|
| Content           | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |
|                   | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|                   | Chapter 1: Introduction to Geograp<br>Information Systems (GIS)  | 1             | T            |
|                   | Chapter 2: Maps and Geospatial<br>Data   | 1             | T            |
|                   | Chapter 3: Digital Representation<br>and Organization of Geospatial<br>Data  | 1             | T            |

#### 54. Advanced Remote Sensing (PH049IU)

|   |   |
|---|---|
| Module designation  | <i>This course provides knowledge and skills of digital image processing for extracting environmental information from satellite and airborne imaging systems. Applications of pre-processing, enhancement, classification, and modeling image processing routines are for environmental monitoring, modeling, and management, and applicable for biological, terrestrial, atmospheric, and oceanic sciences.</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Phan Hiền Vũ  |
| Language  | English   |
| Relation to curriculum  | Elective  |
| Teaching methods  | Lecture, lesson, project.   |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | Previous course:<br>Remote sensing (PH036IU),<br>Introduction to Digital Image Processing (PH038IU)   |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Develop applications of remote sensing in natural disasters and environmental pollution.  |
|  | Skill   | CLO2. Experiment remotely sensed data for monitoring natural hazards and environment, such as drought, flooding, sea level rise, air pollution, urban expansion, etc. |
|  | Attitude  | CLO3. Show the impact of remote sensing techniques for disaster risk and environmental management, and sustainable development.                                       |

|         |  |               |              |
|---------|--|---------------|--------------|
| Content | <p><i>The description of the contents should clearly indicate the weighting of the content and the level.</i></p> <p>Weight: lecture session (3 hours)</p> <p>Teaching levels: I (Introduce); T (Teach); U (Utilize)</p> |               |              |
|         | <b>Topic</b>   | <b>Weight</b> | <b>Level</b> |
|         | Chapter 1 Remote sensing and digital image processing  | 1             | T            |
|         | Chapter 2 Remote sensing data collection   | 1             | T, U         |
|         | Chapter 3 Digital image processing hardware and software   | 1             | T, U         |
|         | Chapter 4 Image Quality Assessment and Statistical Evaluation  | 1             | T, U         |
|         | Chapter 5 Display Alternatives and Scientific Visualization  | 1             | T, U         |
|         | Chapter 6 Electromagnetic Radiation Principles and Radiometric Correction  | 1             | T, U         |
|         | Chapter 7 Geometric Correction   | 2             | T, U         |
|         | Chapter 8 Image Enhancement  | 1             | T, U         |
|         | Chapter 9 Thematic Information Extraction: Pattern Recognition   | 1             | T            |
|         | Chapter 10 Information Extraction Using Artificial Intelligence  | 1             | T            |
|         | Chapter 11 Change Detection  | 2             | T, U         |
|         | Chapter 12 Remote Sensing-Derived Thematic Map Accuracy  | 2             | T, U         |

| Examination forms                  | Short-answer questions  |
|------------------------------------|---|
| Study and examination requirements | <p>Attendance: A minimum attendance of 80 percent is compulsory for the class sessions. Students will be assessed on the basis of their class participation. Questions and comments are strongly encouraged.</p> <p>Assignments/Examination: Students must have more than 50/100 points overall to pass this course.</p>  |

**55. Emerging Engineering Technologies (EE133IU)**

|   |   |
|---|---|
| Module designation  | <i>This course will explore current breakthrough technologies and disruptive innovations that have recently emerged in the past few years. A close examination of the technology will be conducted to understand the application using the new technologies. The class is a series of seminars on each of the emerging technologies</i> |
| Semester(s) in which the module is taught                     | 1, 2  |
| Person responsible for the module                             | Dr. Nguyễn Đình Uyên  |
| Language  | English   |
| Relation to curriculum  | Specialization  |
| Teaching methods  | Lecture, lesson, homework.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 127.5<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 37.5<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 credits/4.62 ECTS   |
| Required and recommended prerequisites for joining the module | None  |

|  |   |   |
|--|---|---|
| Module objectives/intended learning outcomes | Upon the successful completion of this course students will be able to: |   |
|  | <b>Competency level</b>   | <b>Course learning outcome (CLO)</b>  |
|  | Knowledge   | CLO1. Provide the depth of students' knowledge in a new and recently emerged technologies<br><br>CLO2. Provide the introduction into the applications for the emerging technologies |
|  | Skill   | CLO3. To apply the new and emerging technology in an application  |
|  | Attitude  |   |

|                   |  |               |              |

**57. Fundamental of Surveying (PH045IU)**

|   |   |
|---|---|
| Course designation  | <i>This subject is related to some definitions of the Earth's shapes and coordinate systems and is also related to an introduction to measurement equipment, such as theodolite, level, etc. Moreover, it presents ways to conduct basic measurements and methods for estimating the accuracy of measured results. Besides, the course represents the procedures for creating coordinate and leveling traverses in creating topographic maps.</i> |
| Semester(s) in which the course is taught                     | 1, 2  |
| Person responsible for the course                             | Dr. Nguyễn Đình Hùng  |
| Language  | English   |
| Relation to curriculum  | Elective  |
| Teaching methods  | Lecture, lesson, practice, report.  |
| Workload (incl. contact hours, self-study hours)              | (Estimated) Total workload: 140<br>Contact hours (please specify whether lecture, exercise, laboratory session, etc.): lecture: 25, practice: 25<br>Private study including examination preparation, specified in hours: 90   |
| Credit points/ECTS  | 3 (2 theory + 1 practice) credits/5.08 ECTS   |
| Required and recommended prerequisites for joining the module | None  |
